RONALD WASTEWATER

May 11, 2011

Ronald Wastewater District
17505 Linden Ave N
Shoreline, WA 98133

On behalf of the Echo Lake Neighborhood Association, we would like to extend our congratulations for the successful completion of the Echo Lake Trunk Line Replacement and Echo Cove Bypass projects. Using the pipe bursting method mitigated some of the impact of the project, and bypassing the Echo Cove Condominiums solved the line replacement issue in that area. In addition, we were very pleased with the care taken with the art sculpture in the park.

We thank you for working with our Association in communicating your project to the neighborhood, particularly the residents of the Echo Cove Condominiums. The meeting held at the District Office was very helpful in providing our neighbors with information about the project.

Echo Lake is one of the gems in our neighborhood. We applaud the foresight to provide sanitary sewage carrying capacity for future development and growth, and ensure environmental protection for Echo Lake at the same time.

Part of our mission is to promote communications between the residents within the Echo Lake neighborhood and the local public agencies, and we are always available to assist when needed.

With sincere appreciation,

Echo Lake Neighborhood Association
